

Flat Covers Rated For Foot Traffic

Our Customer's Challenge

Odor associated with open top tanks, and clarifiers located at municipal waster water plants is not only a nuisance, but also a potential health hazard.

CPE's Solutions

CPE designs, builds and installs non metallic covers and enclosures to contain the gases. These covers are mated to odor control technologies (scrubbers , bio filters, trickling filters) to eliminate odors. Our covers are flat, which reduces the head space in the tank for odors and gases to collect and also allows for operators to walk on the covers. Hatches are installed for access to equipment.

Our Turn Key Process

- **Field Measurements**
- **Custom design**
- **System Prefabrication**
- **Field Erection**
- **Utility tie ins**
- **System Startup**
